Chapter 1	Non-mathematical, introductory analogy of wavelet theory to fugue analysis and storywriting for the musician	1
Chapter 2	Mathematical summary of multiresolution analysis and relevant wavelet theory	23
Chapter 3	Second generation wavelet shrinkage: a comparison of the lifting scheme and circular convolution in the denoising of digital audio	45
Chapter 4	Using the exponential-decay property of wavelet coefficients to spectrally enhance low-sample-rate audio files: A wavelet-based excitation algorithm	59
Chapter 5	Using the wideband-octave decomposition of wavelet analysis to achieve wideband equalization of digital audio	71
Conclusions and Future Directions		90

Appendix A	Technical notes on the equipment and software used in this thesis.	92
Appendix B	Guidelines on compiling and using the software utilities created for this thesis	95
Appendix C	Forward and inverse wavelet transform code for both the lifted and circular convolution methods	96
Appendix D	C++ source code for programs used in Chapter 3	117
Appendix E	C++ source code for program used in Chapter 4	127
Appendix F	C++ source code for program used in Chapter 5	134
Appendix G	class Aiff_file, code for a C++ class which models AIFF (Audio Interchange File Format) I/O	152
Appendix H	class Waiff_file, code for a C++ class which models a possible wavelet file format (WAIFF - Wavelet Audio Interchange File Format)	224
Appendix I	class Audio_port, code for a C++ class which models real-time audio input/output	251
Appendix J	class Delayline, code for a C++ class which models an interpolating and non-interpolating delay line	267
Appendix K	class Filter, code for a C++ class which models a real-time, time-domain digital filtering (convolution) of digital audio	290
Appendix L	Prototype MATLAB code with examples	302

Figure	Description	Page
1.1	Comparison of different time/frequency resolutions in Fourier Analysis.	3
1.2	Fourier analysis of a sharp transient.	4
1.3	Wavelet-based analysis of a sharp transient.	5
1.4	Mother wavelet and daughter wavelet shapes for different levels of a wavelet analysis.	7
1.5	J.S. Bach, Von Himmel Hoch, Variation No. 4 (manuals only). Illustration of augmentation in a fugue.	10
1.6	J.S. Bach, The Art of the Fugue, Canon No. 1. Illustration of augmentation in a lower register than the theme's register.	11
1.7	J.S. Bach, The Art of the Fugue, Fugue No. 6. Graphical comparison of augmentation in a lower register to wavelet analysis. Overlay of wavelet grid on standard musical notation.	13
1.8	Non-fugal example of wavelet-like analysis using standard musical notation	14
1.9	Wavelet analysis of music in Figure 1.8	14
1.10	Construction of a simple story with text-based scaling functions.	18
2.1	Recursive, digital filterbank configurations for the forward and inverse dyadic wavelet transforms.	24
3.1	Denoising using wavelet analysis	47
4.1	Exponential decay of wavelet coefficients across analysis levels.	63
4.2	Spectral enhancement algorithm.	66
5.1	Wavelet-based equalization	72
5.2	Time-domain view of level 0 analysis coefficients using the 5/3 binary coefficient filterbank; produced using the <code>equalize</code> program.	77
5.3	Time-domain view of level 0 analysis coefficients using the 6/10 binary coefficient filterbank; produced using the <code>equalize</code> program.	78
5.4	Time-domain view of level 1 analysis coefficients using the 5/3 binary coefficient filterbank; produced using the <code>equalize</code> program.	79
5.5	Time-domain view of level 1 analysis coefficients using the 6/10 binary coefficient filterbank; produced using the <code>equalize</code> program.	80
Conc. 1	A proposed waveshaping instrument that uses wavelet analysis as a control mechanism for the transfer function (lookup table)	91

Interactive List of Tables

Click on a heading to jump to the associated table.

Table	Description	Page
2.1	Wavelet coefficients for several analysis and resynthesis filters used in this thesis	44
2.2	Number of vanishing moments for the filters listed in Table 2.1	44
3.1	List of audio examples using circular convolution denoising	56
3.2	List of audio examples using the lifted, interpolating wavelet denoising algorithm	57
4.1	List of audio examples using the spectral enhancement algorithm	69
5.1	List of audio examples using the <code>equalize</code> program. Listening to individual levels of wavelet coefficients.	74-75
5.2	List of audio examples using the <code>equalize</code> program. Time-varying equalization for compositional purposes.	81
C.1	Structure of an input data block to <code>flwt()</code> , a C++ function that performs the fast forward, lifted wavelet transform.	98
C.2	Structure of an output data block processed by <code>flwt()</code> , a C++ function that performs the fast forward, lifted wavelet transform.	98
C.3	Structure of an input data block to <code>iflwt()</code> , a C++ function that performs the fast inverse, lifted wavelet transform.	100
C.4	Structure of an output data block processed by <code>iflwt()</code> , a C++ function that performs the fast inverse, lifted wavelet transform.	100
C.5	Structure of an input data block to <code>fwf()</code> , a C++ function that performs the fast forward, circular convolution wavelet transform.	102
C.6	Structure of an output data block processed by <code>fwf()</code> , a C++ function that performs the fast forward, circular convolution wavelet transform.	102
C.7	Structure of an input data block to <code>ifwf()</code> , a C++ function that performs the fast inverse, circular convolution wavelet transform.	104
C.8	Structure of an output data block processed by <code>ifwf()</code> , a C++ function that performs the fast inverse, circular convolution wavelet transform.	104
F.1	A wavelet-based graphic equalizer's band characteristics	136
G.1	Names and descriptions of C++ programs that use <code>class Aiff_file</code>	161
H.1	Names and descriptions of C++ programs that use <code>class WAiff_file</code>	230
I.1	Names and descriptions of C++ programs that use <code>class Audio_port</code>	256
J.1	Names and descriptions of C++ programs that use <code>class Delayline</code>	271
K.1	Names and descriptions of C++ programs that use <code>class Filter</code>	294
